AgriMitra AI

Features and Their Purpose

1. About AgriMitra AI

AgriMitra AI is an agricultural market decision-support application designed to help farmers understand crop prices and compare markets before selling their produce. It provides market price information, mandi comparisons, estimated transportation costs, price trends, and AI-based guidance.

Main activities:

- Quick Price Check: Check crop prices and market arrivals.
- Personalized Market Comparison: Compare markets using crop, location, produce weight, and estimated transport costs.

The application supports decision-making and does not guarantee profit.

Farmer Application Features

2. Dashboard

What it contains:

- Overview of market information and main features.
- Access to Market Explorer, Compare Markets, AI Advisor, and Alerts.

Purpose: Helps farmers quickly access the features they need.

3. Market Explorer

What it contains:

- Keyword search by crop, mandi, or district.
- Crop/Commodity, State, and District filters.
- Sort Results By option.
- Results table: market/mandi, crop and variety, modal price (₹/quintal), minimum and maximum prices, today's arrivals, price trend, supply status, distance, and view-detail action.

Purpose: Helps farmers explore mandis, understand price and supply conditions, and identify markets to compare.

4. Market Prices and Arrivals

What it contains:

- Minimum and maximum prices.
- Modal price (price at which the largest quantity was traded).
- Arrival volume.
- Crop and variety details.
- Market and date information.

Purpose: Helps farmers understand the price range and supply situation before selling.

5. Compare Markets

What it contains:

- Inputs: crop/commodity, location, and produce weight or quantity.
- Gross Produce Value.
- Estimated Transport Freight.
- Market Score (0–100).
- Net Return Estimate.
- Side-by-side comparison of market options.

Purpose: Helps farmers compare markets after considering estimated transport expenses.

6. AI Market Advisor

What it contains:

- Market-related guidance based on farmer queries and available knowledge.
- Knowledge may include FAQs, crop advice, market information, schemes, logistics guidance, and expert tips.

Purpose: Helps farmers understand market information and make informed decisions.

7. Price Trends

What it contains:

- Historical price information shown through charts and trend views.

Purpose: Helps farmers understand past price movements; historical trends do not guarantee future prices.

8. Market Alerts

What it contains:

- Market-related alerts and updates available in the application.

Purpose: Helps farmers notice relevant market information without repeatedly searching.

9. My Crops

What it contains:

- A place for farmers to maintain information about the crops they grow.

Purpose: Helps farmers focus on information relevant to their crops.

10. Favorite Markets

What it contains:

- Save mandis of interest and revisit them later.

Purpose: Makes it easier to return to preferred markets and compare them.

11. Transport Calculator

What it contains:

- Estimates transportation expenses using details such as distance and produce quantity.

Purpose: Helps farmers consider transport costs when choosing a mandi.

Admin Management Portal Features

12. Admin Overview

What it contains:

- Summary of application and managed information.
- Access to management sections.

Purpose: Helps administrators monitor the system and navigate to management tools.

13. Farmer Management

What it contains:

- Register New Farmer.
- Search by name, phone number, or district.
- Available filters.
- Farmer details, location, primary crop, land size, status, inquiry count, and actions.
- Account activation controls.

Purpose: Helps administrators maintain farmer records and manage account access.

14. Crop Catalog Management

What it contains:

- Add New Crop.
- Search by English name, variety, or category.
- Crop name and category; default variety.
- Typical price range per quintal and shelf-life information.
- Telugu and Kannada crop names.

Purpose: Maintains consistent crop information throughout the application.

15. Mandi and Market Management

What it contains:

- Add New Mandi.
- Search by mandi name, district, or state.
- District/state and reference distance.
- Facilities and grading/sorting availability.
- Trading days and hours.
- Live in Farmer App indicator.

Purpose: Maintains mandi details used in searches, comparisons, and transport estimates.

16. Market Prices and Arrivals Management

What it contains:

- Publish Price Record.

- CSV Batch Import and Export CSV.
- Search by market, crop, or variety; available filters.
- Records show market/location, crop/variety, date, modal price, min/max prices, arrival volume, trend, and actions.

Purpose: Allows administrators to maintain market price and arrival information.

17. AI Advisor Knowledge Base and FAQ Center

What it contains:

- Add Knowledge Entry.
- Search by question, advice, or topic; topic filters.
- FAQ question, answer, topic/category, crop applicability, update date, and publication status.
- Topics may include schemes, logistics rules, market guidance, and expert tips.

Purpose: Maintains information used by the AI Advisor to respond to farmer queries.

18. Reports and Trends

What it contains:

- 7-day, 30-day, and 90-day periods.
- Mandi price differentials, arrival volumes, and farmer query activity.
- Tomato Price Evolution Across Competing Mandis chart.
- Tomato Modal Price vs Arrival Volume chart.
- Registered Farmers by District chart.

Purpose: Helps administrators understand market patterns and application activity.

19. Settings and Data Management

What it contains:

- System diagnostics.
- JSON backup export.
- Seed Data Reset to default test data.
- Data engine and AI Advisor status information.
- Admin role information.
- Backup categories include crops, mandis, market rates, farmers, and AI Advisor knowledge.

Purpose: Helps administrators maintain data, export backups, and restore default data.

Important Data Note

The application identifies market information as demo or historical data for decision support. It is compatible with AGMARKNET/e-NAM data structures, but should not be described as a verified live market-price feed unless a live source is connected and confirmed.

Price, transport, market score, and net-return values are estimates. AgriMitra AI supports decision-making but does not promise a particular profit.
